

W3D2 Lab 3: Comparators

Description:

In this lab you will write a couple of different comparator functions.

Provided:

We've included an Employee class with this Lab with some sample data, and a nameComparator function.

Instructions:

Finish the partially provided Mocha / Chai test that sorts Employees based on their name and checks if it works correctly.

Next write a salaryComparator and again write a test to check if it works correctly.

Also write a hireDateComparator and test it to make sure it works.

Last step:

If you've completed the other labs also test to make sure you can sort these employees in the ArrayList and in the LinkedList.
